GameServer

This section is to show the IT architecture of the company. The IT systems to be used in the company are to be specified, including BPMS, CRM, ERP, DW, BI tools, dashboard, and KM. The use of EAI and decision support systems (BI, DW and Dashboards) shall also be discussed. The IT architecture shall be documented graphically in a diagram showing the systems and the data flows between them, representing systems as nodes and data flows as labelled arrows. The relationships between the systems and the business processes they support shall be made explicit.
